Kidney stones in patients with hypercalciuria due to calcium channel blockers. Hypercalciuria is a common side effect of long-term treatment with calcium channel blockers (CCBs). Whether or not CCBs cause kidney stone formation in these patients is controversial. We studied 40 hypercalciuric patients who were receiving CCBs and had no other documented metabolic abnormalities. Kidney stones developed in 12 patients. We calculated that the age-adjusted rate of kidney stone formation among patients receiving CCBs was similar to that among normal patients. We conclude that hypercalciuria in patients receiving long-term CCBs does not indicate an increased risk of nephrolithiasis. Unless you've been living under a rock for the last couple of weeks, you probably know that Sony's exclusive Spider-Man game came out last month for the PS4, and that it was a smashing success. Even Spider-Man fanboys, however, can't deny that the game is getting a bit repetitive, and that its environments and puzzles are a little underwhelming. A big array of capabilities and options are available in Acorn, such as: Creation of a 3D model of your objects Design of mechanical or hydraulic machines Creation of an electro-mechanical or electro-hydraulic device Design and manufacture of electronic circuits Drawing of equipment and various machines What is the size of Acorn? Obesity is associated with type 2 diabetes, hypertension, and increased risks of heart disease, stroke, and other conditions. Individuals with obesity have a higher risk of morbidity and mortality as compared to those with normal body weight. Obese individuals are also more likely to have other health conditions, such as sleep apnea, cardiovascular disease, and arthritis, which are risk factors for other health conditions. The complex, multifactorial causes of obesity include lack of exercise, poor diet, and genetic and metabolic factors. Obesity, however, is also positively associated with numerous psychological factors, including depression and anxiety. Psychologically induced weight loss is also associated with obesity. In contrast to the complex etiology of obesity, psychological factors are readily modifiable. Therefore, there is a need for effective ways to help individuals improve their psychological health to reduce weight gain, and in particular, to prevent and treat obesity.
